

Hazard Analysis

The following document is a Hazard Analysis overview of all work areas identified by the Safety Officer. It is the culmination of results indicated from the completion of risk assessments, hazard assessments, and PPE (personal protective equipment) evaluations conducted by the Safety Officer. It is intended to encompass all work areas and practices at (your Facility/Division/Office). To enhance this document's effectiveness and accuracy, the individual area assessments should be maintained on file as supporting documentation of the results indicated in this analysis report. These files should be maintained in the Safety Office. This is a "working document". It is intended to be updated as work practices change or as they are modified, added, or deleted. It is at the Safety Officer's discretion that this document be updated. The analysis is categorized and includes an index for quick reference.

This hazard assessment has been performed by the Safety Officer to determine the required type of Personal Protection Equipment for each affected employee. This assessment includes:

- ◆ Walk-through survey
- ◆ Specific job analysis
- ◆ Review of accident statistics
- ◆ Review of safety equipment selection guidelines materials
- ◆ Selection of appropriate required PPE
